Oracle LSNRCTL – Listener Shutdown and Startup Procedures

by RAMESH NATARAJAN on MAY 18, 2009

Starting up and shutting down the oracle listener is a routine task for a database administrator. However a Linux system administrator or programmer may end-up doing some basic DBA operations on development database. It is critical for non-DBAs to understand the basic database admin activities.

In this article, let us review how to start, stop, check status of an oracle listener using **Oracle listener control utility LSNRCTL**.

Also refer to our earlier article about [how to start and stop the Oracle database](#)

How To Start, Stop and Restart Oracle Listener

COURSE

[Linux Sysadmin CentOS 6 Course](#) - Master the Tools,

1. Display Oracle Listener Status

Before starting, stopping or restarting make sure to execute `lsnrctl status` command to check the oracle listener status as shown below. Apart from letting us know whether the listener is up or down, you can also find the following valuable information from the `lsnrctl status` command output.

- Listener Start Date and Time.
- Uptime of listener – How long the listener has been up and running.
- Listener Parameter File – Location of the listener.ora file. Typically located under `$ORACLE_HOME/network/admin`
- Listener Log File – Location of the listener log file. i.e `log.xml`

If the Oracle listener is not running, you'll get the following message.

```
$ lsnrctl status
```

```
LSNRCTL for Linux: Version 11.1.0.6.0 - Production on 04-APR-2009 16:27:39
```

```
Copyright (c) 1991, 2007, Oracle. All rights reserved.
```

```
Connecting to (DESCRIPTION=(ADDRESS=(PROTOCOL=TCP)(HOST=192.168.1.2)(PORT=1521)))
```

```
TNS-12541: TNS:no listener
```

```
TNS-12560: TNS:protocol adapter error
```

```
TNS-00511: No listener
```

```
Linux Error: 111: Connection refused
```

```
Connecting to (DESCRIPTION=(ADDRESS=(PROTOCOL=IPC)(KEY=EXTPROC)))
```

```
TNS-12541: TNS:no listener
```

```
TNS-12560: TNS:protocol adapter error
```

```
TNS-00511: No listener
```

```
Linux Error: 2: No such file or directory
```

Configure it Right, and be Lazy

3. Stop Oracle Listener

If the Oracle listener is running, stop the listener as shown below. This will stop all the listeners. If you want to stop a specific listener, specify the listener name next to stop. i.e lsnrctl stop [listener-name]

```
$ lsnrctl stop  
  
LSNRCTL for Linux: Version 11.1.0.6.0 - Production on 04-APR-2009 16:27:37  
  
Copyright (c) 1991, 2007, Oracle. All rights reserved.  
  
Connecting to (DESCRIPTION=(ADDRESS=(PROTOCOL=TCP)(HOST=192.168.1.2)(PORT=1521)))  
The command completed successfully
```

4. Restart Oracle Listener

To restart the listener use lsnrctl reload as shown below instead of lsnrctl stop and lsnrctl start. reload will read the listener.ora file for new setting without stop and start of the Oracle listener.

Oracle Listener Help

1. View Available Listener Commands

lsnrctl help command will display all available listener commands. In Oracle 11g following are the available listener commands.

- **start** - Start the Oracle listener
- **stop** - Stop the Oracle listener
- **status** - Display the current status of the Oracle listener
- **services** - Retrieve the listener services information
- **version** - Display the oracle listener version information
- **reload** - This will reload the oracle listener SID and parameter files. This is equivalent to lsnrctl stop and lsnrctl start.
- **save_config** – This will save the current settings to the listener.ora file and also take a backup of the listener.ora file before overwriting it. If there are no changes, it will display the message “No changes to save for LISTENER”
- **trace** - Enable the tracing at the listener level. The available options are ‘trace OFF’, ‘trace

USER', 'trace ADMIN' or 'trace SUPPORT'

- **spawn** - Spawns a new with the program with the spawn_alias mentioned in the listener.ora file
- **change_password** – Set the new password to the oracle listener (or) change the existing listener password.
- **show** - Display log files and other relevant listener information.

```
$ lsnrctl help
```

```
LSNRCTL for Linux: Version 11.1.0.6.0 - Production on 04-APR-2009 16:12:09
```

```
Copyright (c) 1991, 2007, Oracle. All rights reserved.
```

```
The following operations are available
```

```
An asterisk (*) denotes a modifier or extended command:
```

start	stop	status
services	version	reload
save_config	trace	spawn
change_password	quit	exit
set*	show*	

2. Get More help on Specific Listener Command

You can get detailed help on a specific oracle listener command as shown below. In the following example, it gives all the available arguments/parameters that can be passed to the lsnrctl show command.

```
$ lsnrctl help show
```

```
LSNRCTL for Linux: Version 11.1.0.6.0 - Production on 04-APR-2009 16:22:28
```

```
Copyright (c) 1991, 2007, Oracle. All rights reserved.
```

The following operations are available after show
An asterisk (*) denotes a modifier or extended command:

rawmode	displaymode
rules	trc_file
trc_directory	trc_level
log_file	log_directory
log_status	current_listener
inbound_connect_timeout	startup_waittime
snmp_visible	save_config_on_stop
dynamic_registration

Thank you...
it's very helpful, clear and nice.

shahnawaz Pagarkar August 26, 2012 at 1:12 pm

7

hello There
I am Shahnawaz Pagarkar
I installed 11g and tryed to start the OEM .
BUt my OEM is not gettin started;
I checked the LISTENER STATUS Lsnrctl status
I stopped the LITENER and then Again i started the LISTENER
I GOT THE MESSAGE BELOW when i tryed to START THE OEM with the help of emctl start
dbconsole . Kindly help

```
C:\Users\user>emctl start dbconsole
```

```
Can't locate CompEMdbconsole.pm in @INC (@INC contains: %s_javapOracleHome%/sysman/admin/scripts %s_javapOracleHome%/bin D:\app\user\product\11.2.0\dbhome_3\perl\bin D:\app\user\product\11.2.0\dbhome_3\perl\lib D:\app\user\product\11.2.0\dbhome_3\perl\lib\site_perl D:\app\user\product\11.2.0\dbhome_3\perl\site\lib D:\app\user\product\11.2.0\dbhome_3\sysman\admin\scripts D:\app\user\product\11.2.0\dbhome_3\sysman\admin\scripts\Net-DNS-0.48\lib D:\app\user\product\11.2.0\dbhome_3\bin D:/app/user/product/11.2.0/dbhome_3/perl/lib D:/app/user/product/11.2.0/dbhome_3/perl/site/lib .) at D:\app\user\product\11.2.0\dbhome_3\bin\EmctlCommon
```

I am sure that there is some LISTENER problem , but i cannot unfortunately cannot figure it !

At the moment my PORT no is 2484 n hostname is user-PC

<https://user-PC:2482/em>

when i had created a new database at last i got a message which said that i need to configure the LISTNER (something related to LISTENER)and then run the emctl script .

Regards

Shahnawaz Pagarkar
