

# JBoss 5.1 Disable/Enable Hot Deploy(HDScanner)

---

 [developer.jboss.org/wiki/JBoss51DisableEnableHotDeployHDScanner](http://developer.jboss.org/wiki/JBoss51DisableEnableHotDeployHDScanner)

Disable Hot Deploy on JBoss 5.1 is easy, just file **jbossAs/server/server-profile/deploy/hdscanner-jboss-beans.xml** remove or move to another folder.

Hot Deploy is disabled, you can deploy/redeploy/undeploy applications via twiddle.sh, for example:

## deploy:

```
./jbossAs/bin/twiddle.sh -s localhost invoke "jboss.system:service=MainDeployer" deploy  
"file:/hileWhichYouWantDeploy"
```

## redeploy:

```
./jbossAs/bin/twiddle.sh -s localhost invoke "jboss.system:service=MainDeployer" redeploy  
"file:/hileWhichYouWantReDeploy"
```

## undeploy:

```
./jbossAs/bin/twiddle.sh -s localhost invoke "jboss.system:service=MainDeployer" undeploy  
"file:/hileWhichYouWantUnDeploy"
```

To re-enable the Hot Deploy, just copy file **hdscanner-jboss-beans.xml** to folder **jbossAs/server/server-profile/deploy/** and execute

```
./twiddle.sh -s localhost invoke "jboss.system:service=MainDeployer" deploy "file:/home/jbossAs5/server/server-  
profile/deploy/hdscanner-jboss-beans.xml"
```
